SUMMARY

Computer Science undergraduate with hands-on experience building full-stack web applications and machine learning models. Skilled in Node.js, React.js, and modern web technologies, with a strong foundation in data structures and algorithms. Eager to apply practical development and problem-solving skills to real-world engineering challenges.

EDUCATION

•Vellore Institute of Technology Bhopal

B.Tech - Computer Science and Engineering

2023 – Present

CGPA: 9.15

PROJECTS

•Online Campus Security Management System

Designed full-stack web application using Agile methodologies

GitHub Link

- Developed a scalable web application using Node.js, Express.js, MongoDB for back-end and HTML, CSS, JavaScript for front-end, ensuring efficient data management and user authentication.
- Implemented features like leave applications, salary calculations, and automated email notifications using RESTful APIs.
- Designed role-based access control and session management to secure sensitive campus data across multiple user roles.

•MindScribe Personal Journal

Built a secure and private personal journaling application using the MERN stack

GitHub Link

- Developed a secure personal journaling application using the MERN stack, enabling users to create, read, update, and delete daily journal entries.
- Built a responsive front-end interface using React.js and TailwindCSS, paired with a RESTful backend using Node.js and Express.js for handling server-side logic and API requests.
- Implemented secure user authentication using JWT with HTTP-only cookies, and structured MongoDB schemas via Mongoose for reliable, validated data persistence.
- Designed a clean, distraction-free UI focused on readability and ease of use for daily journaling.

•Brain Tumor Classification using ResNet-50

Applied machine learning and deep learning techniques for computer vision tasks

GitHub Link

- Engineered a deep learning model with ResNet-50 architecture to classify brain tumors from MRI scans, achieving over 90% accuracy through data augmentation and transfer learning.
- Implemented data preprocessing and augmentation on a Kaggle dataset using TensorFlow and Keras, focusing on convolutional neural networks (CNNs).
- Trained the model for 50 epochs utilizing the Adam optimizer and categorical cross-entropy loss function, with hyperparameter tuning for optimal performance.
- Evaluated model performance using precision, recall, and confusion matrix analysis to validate robustness across tumor classes.

TECHNICAL SKILLS

- **Programming Languages:** C++, Java
- **Frameworks & Libraries:** React.js, Node.js, Express.js, TensorFlow, Keras, OpenCV, Mongoose
- **Databases & Tools:** SQL, MongoDB, Git, GitHub, Docker, RESTful APIs
- **Methodologies:** Agile, Scrum
- **Fundamentals/Coursework:** OOPs, Operating Systems, DBMS, Data Structure
- **Soft Skills:** Leadership, Interpersonal Communication, Teamwork

PROGRAMMING PROFILE

- : Actively practice programming and data structures on platforms like LeetCode, Codeforces, and GeeksforGeeks, with a focus on time and space complexity optimization.
- : Profiles: *LeetCode* | *Codeforces* | *InterviewBit* | *GeeksforGeeks*

CERTIFICATIONS

- MERN Full Stack:** Ethnus Certificate of Completion (Code: 3LKMCQVY) [↗](#)
- Programming in Java:** Vityarthi [↗](#)
